Synthesizing Information Across Collaborating Research

Description

Synthesizing information across collaborating research. Created for Integrative Analysis of Longitudinal Studies of Aging (IALSA).

Note

The release version will be available through CRAN. The most recent development version is available through GitHub. Please see the installation examples below.

If you're having trouble with the package, please install the development version. If this doesn't solve your problem, please create a new issue, or email Will or Andrey.

Author(s)

William Howard Beasley –Assistant Professor of Research, University of Oklahoma Health Sciences Center, Dept of Pediatrics, Biomedical and Behavioral Methodology Core (BBMC)

Andrey Koval –Post Doc, University of Victoria, Department of Psychology

References

IALSA is funded through an NIH/NIA Program Project Grant (P01AG043362); 2013-2018) to Oregon Health & Science University (Program Directors: Scott Hofer, Andrea Piccinin, Jeffrey Kaye, and Diana Kuh) and previously funded by NIH/NIA (R01AG026453; 2007-2013) and CIHR (103284; 2010-2013).

Examples

```
## Not run:
# Install/update IalsaSynthesis with the release version from CRAN.
install.packages('IalsaSynthesis')

# Install/update IalsaSynthesis with the development version from GitHub
#install.packages('devtools') #Uncomment if `devtools` isn't installed already.
devtools::install_github('IALSA/IalsaSynthesis')

## End(Not run)
```

---

extract

Extract the values within model output files.

Description

Functions that extract the values within model output files.

Usage

```
extract_output_filename(mplus_output)
```

Arguments

mplus_output   Text containing model output.

Value

A `numeric` value corresponding to the desired quantity.

Author(s)

Will Beasley

Examples

```
library(IalsaSynthesis) #Load the package into the current R session.
```

---

validate   *Functions that check the validty of values throughout the workflow.*

Description

These functions help identify mistakes in formatting before the create difficult-to-diagnose problems later.

Usage

```
validate_filename_output(filename, path, file_extension_expected = "out",
  underscore_count_expected = 4L)
```

Arguments

filename   The name of the file to be validated.

path   The location of the file to be validated.

file_extension_expected

                     The extension of the file. This defaults to "out", which corresponds to Mplus output.

underscore_count_expected

                     The number of underscores required in the name (not currently used).

Value

An `invisible` `TRUE` value if the filename is valid. Otherwise, an error is thrown.

Author(s)

Will Beasley

Examples

```
library(IalsaSynthesis) #Load the package into the current R session.
## Not run:
path <- "./studies/eas"
good_name <- "u1_male_aehplus_muscle_noCog_hand_noCogSpec.out"
validate_filename_output(good_name, path)

bad_name <- "missing_something.outtttt"
validate_filename_output(bad_name, path)

## End(Not run)
```
